

We listen. We learn. We deliver.

VALOR CAD

Public Safety & Enterprise Command & Control

Mission-critical command and coordination for public safety and enterprise security.

- Cloud
- Premise-Based
- Hybrid

Protecting your community and those who serve

Built for the demands of public safety and enterprise security operations, Valor CAD delivers real-time situational awareness and unified incident command within a single, mission-hardened platform — integrating NG911-compliant workflows, GIS-driven field awareness, mobile access, and physical security alarm convergence across every deployment environment. The platform adapts to your agency's procedures and escalation protocols, not the other way around. Whether deployed at a 911 PSAP or a Global Security Operations Center, Valor CAD gives operators, commanders, and security directors the situational clarity and decisive speed that life-safety operations demand.

CAPABILITIES

Dispatch Operations

- **Primary & Secondary CC**
Synchronized command centers ensure no single point of failure.
- **SOP Q&A**
Instantly surfaces the correct SOP for any event type – providing dynamic subsequent SOPs based on the answer to a question.
- **Stacked & Reassigned**
Queue incoming calls automatically. Easily reassign units when priorities shift.
- **Unit Safety Timer**
Auto-tracks officer check-in by event type. Visual and audible alerts escalate based on thresholds.
- **Agency Command Line**
Every CC configures its own syntax for efficient operation.

Intelligence & AI

- **AI Note Summarization**
Machine learning summarizes long incident notes into concise, actionable reports.
- **Link Analysis**
Know the real threat based on shared intelligence – BOLO, subject, vehicle, priors, known associates.
- **Recommended Units**
Based on event type, zone, time of day, and day of week.
- **Ad-hoc Reports & Graphs**
Intuitive report builder with live charting. Export to PDF or spreadsheet.
- **User-Defined Fields**
Capture any required data point for your operational needs.
- **Mapping**
Real-time GIS layers, with incident clustering on one canvas.

Continuity & Reach

- **Mass Notification**
Push alerts to personnel or the public.
- **Citizen Engagement**
Suspicious Activity Report with two-way communication directly into comm center operator.
- **Hospital Diversion**
Hospital capacity awareness – reroute patients during mass-casualty events.
- **Mobile**
Runs on laptops, tablets, and smartphones.
- **Cloud / Premise / Hybrid / COOP**
Deploy in the cloud, on your own infrastructure, a hybrid model, or COOP site.
- **Modern UI & Integration**
Intuitive interface with seamless integration.

Modernizing public safety and enterprise command & control since 1994.
